# How better tech can help the police protect and serve the public more effectively
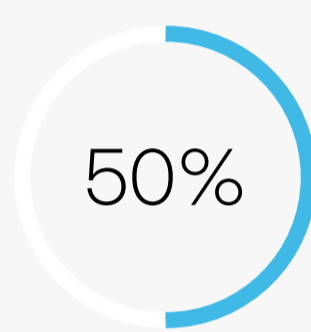

We recently partnered with Censuswide to explore the role of technology in policing, identify where improvements can be made, and look at possible solutions and how to implement them.

Check out some of the key findings below.

## Ineffective technology impacts policing and prevents improvement to services

75%
of policing respondents said inefficient tech was an issue

50%
said increasing the efficiency of existing tech investments is their most important operational priority

Legacy tech and digital skills are the biggest barriers to improving services

41%
named outdated software and hardware as examples of legacy tech their force still uses

31%
said user resistance or limited digital skills were an area of difficulty
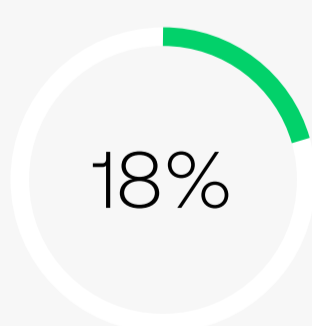

Training is key to closing the skills gap

33%
said a lack of training or knowledge on how to use tech was holding back improvement

Emerging tech is paving the way for more data-led policing

18%
said real-time mapping and location-based analytics are a priority

Tech can help your police force provide an even better service.
